

Update: Security Relating to Canon Products (Apache Log4j Vulnerability)

Published: December 28, 2021

Canon U.S.A. Inc

Recently, the Apache Software Foundation disclosed an Apache Log4j vulnerability (CVE -2021-44228) which could allow an attacker to remotely execute arbitrary code.

Following our internal investigation, we have confirmed that there is no impact on products and services developed and manufactured by Canon Inc.

Additional information will be published on this page as necessary.
